

CHARITY WAYMOUTH

Charity Waymouth: graduate of the Universities of London and of Aberdeen, your studies of growth, metabolism, differentiation, and malignant transformation have contributed much to our understanding of the biology of human and animal cells. Your pioneering efforts in the development of tissue culture methods and your encouragement of a host of young investigators have fostered enthusiastic participation in this enterprise by a generation of scientists in laboratories around the world. Your reputation in the world of science has been complemented by your labors as a devoted churchwoman in the Episcopal Diocese of Maine, where your wise counsel has earned you great respect. For your years of dedication to the advancement of knowledge and for your service to your colleagues, to professional societies, and to the Jackson Laboratories in Bar Harbor., Bowdoin is pleased now to claim you as one of her own.

In exercise of the authority given me by the Governing Boards, I now create you,

Honoris Causa
Doctor of Science
