

Report on Activities at Headquarters
from December 24, 1914 to February , 1915.

December 24-M

Mackillan and Tanquary, and Etukasho set out for Upernivik to get the mail and such supplies as may have been left there by various vessels the past summer. In company with a number of Etah Eskimos - Ahkpoodasho, his wife and daughter; Nookapingwa, his wife Yeeve, and little son; Ahcomadingwa and his wife Inaloo; and Oolie and Kyweeksha - they left at noon. Soon after they left, Greene and Allen came in in time for dinner.

December 25-

Jot and Oobloya left about noon for Kangerdluqsuaq. I prepared the Christmas dinner - roast haunch of venison, peas, tomatoes, potatoes, cranberries, fruitcake, bread and butter, strawberry jam, cherries, and coffee. The day was quiet and pleasant.

December 26-

I straightened out my room, and began work on my botany exsiccanti. Hal and I began taking alternate watches of twelve hours each.

December 27-

I devoted the day to familiarizing myself with the meteorological system Mac is using, and the records and instruments left in my care.

December 28-

I worked all day on the botany, putting in almost twelve hours at this tedious but very necessary work.

December 29-

Jot came back. He reported open water beyond Sonntag Bay; because they could not get by, Oobloya decided to come back and wait a day or two before going on. Greene came in about twelve o'clock, a little later, Allen came in. He was quite sick, and the doctor ordered him to bed at once. About three o'clock Oobloya, Kakochea, and Sammie went out after rabbits; they came back about midnight without having killed anything.

December 30-

Jot worked all day on komatiks, and in evening made ready to start out again on the morrow.

December 31-

Jot and Oobloya left again for Kangerdluqsuaq. Panikpa and Aktuk-Sungwa accompanied them. I worked all day on meteorology and botany. Allen who has been almost seriously ill, is much better now.

January 1-H

Hal, Jerome, and I watched the old year out. Hal and I played chess and I won one game from him. After midnight, Hal, Sammie, Kakochea and I unpacked 28 boxes of food with which I stocked up. I also put in a tin box to catch the oil that runs over when the cans are filled. I worked some on botany. I cooked dinner - broiled caribou steak, turnips, cranberry sauce, bread and butter, coffee, and pears. Fitz came in, and we had dinner at six-thirty.

January 2-

Greene and Jerome stayed in. I worked at botany, diary, etc. Busy all day at regular routine. Greene walked out to island, but came in for dinner; He began his fifth snow-house. Jerome is quite well.

January 3-

Arklie came in with Alningwa late in the afternoon. One of his bitches had pups on the way. In the evening Greene went out to the island. I made out weather record forms in Mac's book for two months in advance.

Report on Activities at Leadville
from December 24, 1914 to January 1, 1915.

December 24-25

Local mail was sent out for Upernivik
to get the mail and such supplies as may have been left there by
four weeks in the past summer. In company with a number of Erik
-Akkoobadook, his wife and daughter; Nookaginnuk, his wife and
son; Annonnook and his wife; and John and Alice came in time for dinner.

December 26

John and George left about noon for Kangarjuk. Prepared
the Christmas dinner - roast of venison, peas, tomatoes, potatoes,
cranberries, fruitcake, bread and butter, cranberry jam, cherries, and
coffee. The day was quiet and pleasant.

December 27

I scrubbed out my room, and began work on my colony exci-
sted. John and I began taking alternate watches of twelve hours each.

December 28

Invested the day in familiarizing myself with the meteorologi-
cal system in use, and the records and instruments left in charge.

December 29

Worked all day on the colony, putting in almost twelve hours
at this station but very necessary work.

December 30

John came back. He reported open water beyond Summit Bay, because
they could not get by. George decided to come back and wait a day or two
before going on. Greene came in about twelve o'clock. Little later, Allen came
in. He was quite sick, and the doctor ordered him to bed at once. About three
o'clock George, Kekochuk, and Emma went out after medicine; they came back
about midnight without having killed anything.

December 31

John worked all day on Kooktik, and in evening made ready to start
out again on the morrow.

January 1

John and George left again for Kangarjuk. Frank and Erik
Singer accompanied them. I worked all day on meteorology and botany. Allen
who has been almost entirely ill, is now better now.

January 2

John, Jerome, and I worked the old year out. I played chess and
I won one game from him. After midnight, John, Emma, Kekochuk and I unpacked
38 boxes of food which I stacked up. I also put in a tin box to catch
the oil that runs over when the cans are filled. I worked some on botany. I
cooked dinner - stews, turnips, cranberry sauce, bread and
butter, coffee, and beer. This was dinner at six-thirty.

January 3

John and Jerome stayed in. I worked at botany, diary, etc. Every day
at regular routine. Greene walked out to island, but came in for dinner.
He began his fifth snow-house. Jerome is quite well.

January 4

Allen came in with Alingwa late in the afternoon. One of his
dishes had pups on the way. In the evening Greene went out to the island.
I made out weather record forms in Mac's book for two months in advance.

January 4-

In forenoon Allen went out to the island again. I worked all day on the botany collections.

January 5-

In forenoon I worked on my botany and until dinner. After dinner I packed up two boxes of books that I shall not use during my stay up here. Brindle had nine pups of which three died and Hal killed two. Hal brought her into the house for a day or two until the rest of her pups should be dry.

January 6-

I mounted the new specimens I obtained from Sonntag Bay last fall; these represented species of which I had not found specimens at Umanak. I also packed another box of books. Green came in for dinner; he reported Alh Allen quite well again.

January 7-

In botany today I completed mounting the Ranunculaceae. I packed a box of minor scientific instruments that I feel confident now that I shall not use any more up here.

January 8-

Until dinner I worked on the Drabae, mounting some thirty sheets. I also catalogued and arranged my collections of eggs, nests, and skins. Greene came in for dinner.

January 9-

I mounted and packed my Saxifragae. I mounted 28 sheets of these. I also worked further on my ornithology collections. Green came in for dinner again.

January 10-

Jot got in about noon with Oobloya. With them came Sechmann Rossbach and Enoch Christiansen accompanied them back from Kangerdluak. Arklio who had been down along the coast in hopes of getting a walrus, also came back with them. Allen and Green came in for dinner. Sipsoo also came.

January 11-

Panikpa and Kangah came in today, the latter with a box of sugar for us sent up from Umanak by Macmillan. I wrote up the meteorological records and paid off Kangah with one box dog biscuit, some tea, and some tobacco and candles. For a fox skin which he asserted was at Nerkre and which he promised to bring up later, I gave him a knife. In the evening I completed packing my ornithological records, and all my specimens. Greene went out to the island about noon and a little later Allen went out.

January 12-

Green came in from the island and Sechmann and Enoch went out to visit Allen there, remaining out for dinner. Sipsoo went up to Lyttleton Island to get some eggs he had cached there. He reported the ice very bad most of the way. Besides getting a big dinner I had to attend to giving Sechmann some recompensation for the very admirable way in which he treated Tank and me last summer. I also had to fit out Sipsoo with whom I traded for some fox skins and about three dozen fresh eggs. I treated him very liberally as I felt sure Macmillan would wish me to do, not merely for policy's sake. But that we might retain his active good will. In the evening Hal and I took measurements of Kangah for ethnological purposes. Almost unusual and peculiar aurora hung over the glacier at the head of the fjord about midnight.

Faint, illegible text, possibly bleed-through from the reverse side of the page. The text is mirrored and difficult to decipher.

January 13-

Sechmann, Enoch, Sipsco, and Mahmone left almost before it got light. Kangah did not go which fact lends color to Ahcotingwa's assertion that he has married Owdukaingya for the time being at least though Ahcotingwa further says she does not know whether it is a permanent arrangement or not.

January 14-

Jot worked on Oobloya's komatik most of the day, making it quite ready again. Kangah set out for the south but went only as far as the island where he stayed most of the day, leaving late at night. Mene came in about three o'clock; upon my questioning him he said that MacMillan had said he would forget Mene's dereliction in the past, but not being sure as to the genuineness of Mene's statement I was not very cordial even though I did not forget Mene's kindness last summer. I preferred to wait until MacMillan himself gave me permission to recompense him. Hal went out to the island at noon and came in with Green who went out again after dinner. Mene brought nothing up giving as his excuse that he was too heavily loaded with his own effects. I cleaned out the storeroom and rearranged the boxes. We all thought Mene would be able to give us further news about the war which Sechmann told us was raging in Europe, a war begun by Germany and France.

January 15-

Jot completed the repairs on Oobloya's komatik, and Oobloya and Arklio lashed it. I worked at my botany until my eyes went back on me. Mene went out to see Panikpa and came back with the story that Panikpa had said that he intended taking Kakochea away because he needed him to help him if he were to obtain an adequate supply of food. I would not pretend to support Panikpa's attitude at all and so declared to Mene, intimating to the latter in no unmistakable manner that I did not consider it any of his business. I did, however, decide to tell Panikpa at my first opportunity that I did not think it right to take Kakochea away at this time, and further to apprise him that MacMillan might want him, at Tank's request, to go with Tank next spring to Fort Conger. I hoped by this information to appease or anticipate any resentment that Panikpa might feel.

January 16-

Jot began work on Arklio's komatik. I completed my work on my botany specimens at midnight, having worked on them fourteen hours steadily. Mene did not leave as he had intended because of bad weather. Hal protested against Jot's working further on the komatiks in the living room. I spoke to Jot about it leaving it to Jot to do all he can out in the workshop. Jot declared that he was not feeling well and could not work there, but that he would have the Eskimo do their part there.

January 17-

Green and Allen came in for dinner today. I sorted out my mounted specimens and labeled and packed up my exsiccates. I had everything in order by dinner time and made some doughnuts to celebrate. Everybody seems feeling out of sorts more or less.

January 18-

Mene left. Arklio, Sammie, Oobloya, and Kakochea went out after rabbits of which Arklio got three and Sammie one. I put new records on the instruments and made out the meteorological records. Late in the evening at Hal's reopening the Komatik-building proposition by reprotesting, the matter was threshed out with considerable heat. Upon Hal's declaring that he would have to be tied to prevent by force any attempt by Jot to continue his building work in the living room, I agreed to order Jot to cease all work on the komatik in the living room. We all were agreed—Green, Allen, Hal, and I that the living room was not the proper place to do such work, particularly since a special room was arranged for the purpose. Though supporting Hal's protest I was reluctant to give the order that Jot should cease to work in the living room, both because it was a reversal of MacMillan's policy, and because Jot has

January 13-

Green and Allen came in for dinner today. I started out my mounted specimens and loaded and packed up my excelsior-lined everything in order by dinner time and made some doughnuts to celebrate. Everybody seems feeling out of sorts here or less.

January 14-

Joe worked on Goble's Komatik most of the day, making it quite ready again. I went out for the north but went only as far as the island where he stayed most of the day, leaving late at night. He came in about three o'clock; upon my questioning him he said that MacMillan had said he would forget Leno's declaration in the past, but not being sure as to the genuineness of Leno's statement I was not very cordial even though I did not forget Leno's kindness last summer. I preferred to wait until MacMillan himself gave me permission to recompense him. He went out to the island at noon and came in with Green who went out again after dinner. Leno brought nothing up giving as his excuse that he was too heavily loaded with his own effects. I cleaned out the storeroom and arranged the boxes. We all thought Leno would be able to give us further news about the war which Goetzmann told us was raging in Europe, a war begun by Germany and France.

January 15-

Joe completed the repairs on Goble's Komatik and Goble and Arklio finished it. I worked at my boxery until my eyes went back on me. Leno went out to see Lankin and came back with the story that Lankin had said that he intended taking Kokochev away because he needed him to help him if he were to obtain an adequate supply of food. I would not pretend to support Lankin's attitude at all and so declined to Leno, intimating to the latter in no unambiguous manner that I did not consider it any of his business. I did, however, decide to tell Lankin at my first opportunity that I did not think it right to take Kokochev away at this time, and further to advise him that MacMillan might want him, at Lankin's request, to go with Lankin next spring to Fort Conroy. I hoped by this intimation to prevent or at least to have any resentment that Lankin might feel.

January 16-

Joe began work on Arklio's Komatik. I completed my work on my boxery and specimens at midnight, having worked on them fourteen hours absently. Leno did not leave as he had intended because of bad weather. He protested against Joe's working further on the Komatik in the living room. I spoke to Joe about it, leaving it to Joe to do all he can out in the workshop. Joe decided that he was not feeling well and could not work there, but that he would leave the Komatik to there part there.

January 17-

Green and Allen came in for dinner today. I started out my mounted specimens and loaded and packed up my excelsior-lined everything in order by dinner time and made some doughnuts to celebrate. Everybody seems feeling out of sorts here or less.

January 18-

Joe left. Arklio, Goble, Goble, and Kokochev went out after repairs to of which Arklio got three and Goble one. I put new records on the inside of the Komatik and made out the meteorological records. Late in the evening at Hal's request the Komatik-building proposition by protesting, the matter was dropped out with considerable heat. Leno said declaring that he would have to be tied to prevent by force any attempt by Joe to continue his building work in the living room. I agreed to order Joe to cease all work on the Komatik in the living room. We all were agreed - Green, Allen, Hal, and I that the living room was not the proper place to do such work, particularly since a special room was arranged for the purpose. Though supporting Hal's protest I was reluctant to give the order that Joe should cease to work in the living room, both because it was a reversal of MacMillan's policy, and because Joe had

January 19--(continued)

had previously declared that the komatiks would go unbuilt. Before the discussion was over Jot who had been in bed rose and stated before I had any chance to say anything that he would do the work in the workshop. Pan-ikpa came over for a little while and I told him of MacMillans probably wishing him to accompany Tank on the trip to Fort Conger. The old fellow was very much pleased, apparently. Hal began work on a snow house.

January 20--

Hal worked some on his snow house. Jot and I thoroughly overhauled and cleaned out the workshop. Sammie and Kakochea began getting ready for their trip south. They will leave tomorrow for Kangerdluksuah whither they have decided to go instead of to Umanak as they had originally intended.

January 20--

Sammie and Kakochea did not leave because their clothes were not ready. Allen and Green came in to a rabbit dinner that I had prepared. Green and I cleaned up the Attic.

January 21--

I cleaned out the store room, packed some boxes, and helped Sammie and Kakochea get ready to leave on the morrow.

January 22--

Bright and early Sammie and Kakochea left for Kangerdluksuah, as gear fitting out as we could make them. Jot completed Arklio's komatik. I began sorting out my stuff in the attic. I also packed up a box of personal belongings.

January 23--

Koolootina and Aelaeatingwa came up from Sonntag Bay, where they saw Mene. They had not seen Kakochea and Sammie. I cleaned up my room, packed two boxes, and carried out and cached all that I had packed.

January 24--

Hal worked on his snowhouse. Allen and Green came in for dinner and Green also made a snowhouse. Nukapingwa, Veevee and baby, and Oolie got back late in the afternoon. I packed another box; I am engaged on my geological specimens now.

January 25--

Arklio and Oobloya were prepared to go to the walrus hunting grounds for a while, but because of bad weather they did not leave today. Hal worked on his snowhouse today, and ~~Sammie~~ Jot began to build Green's komatik. I packed two more boxes. Nearly all my scientific equipment that I do not expect to have any use for, all the books I do not expect to have need of, all my scientific collections, and a small part of my personal belongings, are all ready for shipment to the States.

January 26--

Hal went out for a walk of some length. I carried in ten boxes of provisions, and overhauled and rearranged the outside store room. Jot worked on Green's komatik. Arklio and Koolootina on one sledge, and Oobloya and Nukapingwa on another left for Sonntag Bay to hunt walrus. Green came in and worked on books in the library.

January 27--

I opened boxes and stored up pantry and storeroom. Veevee and I cleaned up the kitchen and pantry shelves, no mean task, considering their condition. Hal went for a walk. Elatoo, Alningwa, and Ahweeahgoodloo went out to the island.

January 28--

I cleared up my bad films some forty in number; cleaned up the water tank and reservoir in the stove; and helped Veevee clean the stove. On account of bad weather the women had to stay out on the island. Green who had planned to come in could not do so.

(continued)

had previously declared that the Komiks would be made before the discussion was over but who had been in bed then and wanted before I had any chance to say anything that he would do the work in the workshop. Then like came over for a little while and I told him of Kachina's previous wish to bring him to the trip to Fort Conger. The old fellow was very much pleased, especially that he began work on a snow house.

January 19-

Hal worked some on his snow house. Joe and I thoroughly overhauled and cleaned out the workshop. Gamin and Kachina began getting ready for their trip south. They will leave tomorrow for Kangurvik. They have decided to go instead of to Umanak as they had originally intended.

January 20-

Gamin and Kachina did not leave because their clothes were not ready. A small dinner came in to a night dinner that I had prepared. Green and I cleaned up the shop.

January 21-

I cleaned out the store room, packed some boxes, and helped Gamin and Kachina get ready to leave on the morning.

January 22-

Bright and early Gamin and Kachina left for Kangurvik. As we were getting out we could make them. Joe completed Kachina's Komik. I began sorting out my stuff in the attic, taking packed up a box of personal belongings.

January 23-

Kachina and Kachina came up from Gamin's Bay, where they had been. They had seen Kachina and Gamin. I cleaned up my room, packed two boxes, and carried out and carried all that I had packed.

January 24-

Hal worked on his snow house. Allen and Green came in for dinner and Green also made a snow house. Kachina, Vevee and Gamin got back late in the afternoon. I packed another box; I am engaged on my official specimens now.

January 25-

Kachina and Gamin are proposed to go to the winter hunting grounds for a while, but because of bad weather they did not leave today. Hal worked on his snow house today, making for Gamin to build Gamin's Komik. I packed two more boxes, nearly all my Kachina's specimens that I do not expect to have any use for, all the books I do not expect to have need of, all my scientific collections, and a small part of my personal belongings, and all ready for shipment to the States.

January 26-

Hal went out for a walk of some length. I started in the corner of the station, and overhauled and rearranged the outside store room. Hal worked on Gamin's Komik. Kachina and Kachina on one side, and Gamin and Kachina on another left for Gamin's Bay to build winter house in the morning.

January 27-

I opened boxes and stored up party and store room. Vevee and I also cleaned up the kitchen and pantry shelves, to make neat, considering their condition. Hal went for a walk. Kachina, and Kachina's good went out to the island.

January 28-

I cleared up my bed, lit a new lamp, and cleaned up the stove. On account of bad weather the snow was so heavy that the island. Green who had intended to come in could not do so.

W.S.B. REGENT LINEN

January 29-

Green and the women came in from the island this morning. I classified my films. About dinnertime our walrus hunters returned, having stayed at Sonntag Bay during their absence, and gone as far as Peteravik, without having seen any game. They brought back a shoulder of walrus part of one That Sipsoo had recently killed, for which he wishes later a box of dog-biscuit. Jot has done as much on Green's komatik as he can without lashing.

January 30-

Green, and a little later, Allen, came in today. It has been rather a dull day all around, for Hal, Jot, and I all have headaches and the Innuits are pretty generally affected with the influenza.

January 31-

Green spent all day getting ready, and I held myself in readiness to give him any help he might need. Hal went out to see how Allen is faring.

February 1-

Sometime last night Kangah, with his son, and Clysha arrived. Kangah brought the fox skin he promised when he was here last. He wished to give me another chance to test his integrity I guess, for he asked me to give him a case of oil for four fox skins that he would catch at Nerkre, but I declined to be so trusting.

Green, Oobloya, and Arklio, as fully fitted out as I was able to make them left for the big cache, today. Green took Koolootina's dogs, rather a poo team for such a trip, and Arklio's small komatik. Nookapingwa went with them to help them over the rough ice. Their sledges were laden with the loads prescribed by MacMillan before he left.

As soon as they were gone Hal set out for the island to see Allen and I in accordance with a determination to stay so closely confined to the house as I have been for a over a month, no matter what the consequence, when for a walk up the valley back of the house,

When I came back I was met by Nookapingwa with the news that he had broken Green's komatik near Sunrise Point, and come back after Kagah's. I was sorry to hear this for we should be forced to keep Kangah during Green's absence and perhaps pay him well besides. He said also that they had been forced to cache the coal on Sunrise Point. About six o'clock in the evening Green came in, having broken the upstandards on Kangah's komatik and decided to come back for repairs and wait a day before going on. At midnight, Arklio and Oobloya who had taken their loads as far as the smooth ice and taken some meat from a cache on Lyttleton Island, came in.

Esayo came in from Igloodeaswitsome time today. He reported that Anowee and a number of other Eskimo down the coast were quite seriously ill with the influenza, and that there was a shortage of meat everywhere.

February 2-

All day Green was engaged in making ready to leave again on the morrow. Jot, Nookapingwa, and Oolie went out hunting; Nookapingwa got two rabbits. Esayo and I walked out to the island to see how Allen is getting along. Allen was busy on his batteries, which he had just charged, preparatory to putting them out of commission. Esayo and I stopped at Panikpa's igloo on our way back.

February 3-

Green taking Nookapingwa's komatik, Oobloya, and Arklio left again. I went out to the island. Allen came back with me, but went back almost at once. Sammie and Kakochea came back from down the coast; they report a shortage of meat everywhere. Sammie said he did not feed his dogs for six days before he got to Peteravik. I set Elato at work on a pair of kamiks for Allen. I fixed Esayo out to go again.

January 30-

Green and the women came in from the island this morning. I dressed
about dinner time. About dinner time our waders returned, having stayed
at about 10:00. They brought back a number of waders, without
having seen any more. They brought back a number of waders, without
that I had seen recently killed, for which he was later a box of
dinner. It was done as much on Green's account as he can without looking.

January 30-

Green, and a little later, Allen, came in today. It has been rather a
still day all around, for Hal, too, and all have had aches and the insects are
and pretty generally killed with the influenza.

January 31-

Green spent all day getting ready, and I held myself in readiness to
give him any help he might need. Hal went out to see how Allen is feeling.

February 1-

Sometime last night Kanga, with his son, and Giza, arrived. Kanga
brought the fox skin he promised when he was here last. He wanted to give
me another chance to test his integrity. I guess, for he asked me to give
him a case of oil for four fox skins that he would catch at Nerko, but I
declined to do so.

Green, Golev, and Kikka, as I fully expected, as I was able to make
them for the day today. Green took Kulev's dog, rather a poor
one for such a trip, and Kikka's small Komatik. Kulev's dog went with them
to help them over the rough sea. Their sledges were taken with the loads and
packed by Kulev's son to the island.

As soon as they were on the island, I had to see Allen
and I in agreement with the influenza to try to stay as long as possible
today as I have been for a week or more. The matter that the influenza, then
for a while in the valley below the island.

When I came back I was told that Kulev's son had
taken Green's Komatik near Gulev's point, and came back after Kulev's. I
was sorry to hear this for we should be forced to keep going during
Green's absence and perhaps pay him well besides. He said also that they had
been forced to make the coal on Gulev's point. About six o'clock in the
evening Green came in, having taken the sledges and Kulev's Komatik
and decided to come back for needles and with a day's work on it.
Kikka, Golev, and Golev, who had taken their loads on the island, came in
too and were very tired from a week on the island, some in.

They came in from the island at the same time. He reported that
Anowak and a number of other Eskimos had come over quite suddenly
all with the influenza, and that there was a shortage of meat everywhere.

February 3-

All day Green was engaged in making ready to leave again on the mor-
row. Kulev, Kulev's son, and Golev went out hunting; Kulev's son got two red-
polls. Golev and I talked over the island to see how Allen is getting along.
Allen was very on his feet, which he had just changed, preparatory to
getting him out of the hospital. Golev and I stopped at Kulev's place on our
way out.

February 5-

Green came in, Kulev's Komatik, Golev, and Kikka today again.
I went out to the island. Allen came back with me, and went back almost at once
Golev and Kulev's son came back from their hunt; they report a shortage
of meat everywhere. Golev said he did not feed his dog for six days be-
fore he got to Kulev's. I see first at work on a pair of knives for Allen.
Fixed Golev out to go again.

Etah, N. Greenland
February 6, 1915.

TO

Jerome Lee Allen-

You will pursue the advice which Dr. H. J. Hunt has submitted, and of which a copy accompanies this order, until further orders.

H. Edwin Koblar
In charge of headquarters, pro tempore.

Copy.

Etah, North Greenland, Feb. 5th, 1915.

TO

The Chief at Headquarters.

Whereas Mr. Jerome Lee Allen has not been in the best of health and has constantly been losing weight during the winter; I advise;

That until such time as his weight and health begin to improve materially, he shall keep regular hours of eating, sleeping, and exercise.

That his sleep shall be in the nighttime, and shall be of eight or more hours duration.

That his exercise shall be in the open and shall be of at least one hour's duration, and under favorable conditions, of three or four hours.

That his meals shall be at the regular times for meals unless there shall be a reasonable excuse.

That he shall avoid those articles of food which he thinks may disagree with him; chew his food well, and eat slowly.

That he shall take two pills after each meal, each pill to consist of iron, 1 gr.; quinine, 1 gr.; and strichnine, 1 gr.

(Signed) Harrison J. Hunt,
Surgeon to Crockerland Expedition.

W. S. & B. REGENT LINEN

MADE IN U. S. A.

Etah, North Greenland. Feb., 5th. 1915.

To the Chief of Headquarters.

Whereas Mr Jerome Lee Allen has not been in the best of health and has been constantly losing weight during the winter.

That he shall take two pills after each meal, each pill to consist of iron igr. quinine igr. strychnine $\frac{1}{10}$ gr.

Harrison J Hunt
Surgeon & Crookedore Specialist,

W. B. ALLEN, M.D., 1881

W. B. ALLEN'S RECENT TREATMENT

of the disease known as Tuberculosis of the Lungs.

There has been some discussion of late years as to the best method of treating Tuberculosis of the Lungs. It is generally admitted that the best method is to give the patient a course of treatment which will result in the formation of a permanent scar over the diseased part of the lung. This can be accomplished by the use of the following method:

1. The patient should be kept in a warm, dry, and airy room. 2. The patient should be kept in bed for at least one month, and under favorable conditions, at least for four months. 3. The patient should be kept on a diet of soft, easily digested food, such as milk, cream, and butter. 4. The patient should be kept on a course of treatment which will result in the formation of a permanent scar over the diseased part of the lung.

5. The patient should be kept on a course of treatment which will result in the formation of a permanent scar over the diseased part of the lung. 6. The patient should be kept on a course of treatment which will result in the formation of a permanent scar over the diseased part of the lung. 7. The patient should be kept on a course of treatment which will result in the formation of a permanent scar over the diseased part of the lung.

W. B. ALLEN, M.D.

1000 Broadway, New York

February 4-

4 Hal is quite ill. I sent Sammie, Oolie, and Kakochea out after Allen's belonging's. Ahcotingwa went over to the motor boat to pick out another caribou skin for my koolstah and thence out to the island with the boys. Allen came in to stay.

February 5-

I went out to Sunrise Point to see how the ice is. My kamik had no soles and Ahcotingwa forgot to put grass in one of my kamiks, so before I could arrange to prevent, my foot was frozen-not seriously. Hal is still indisposed. He and I took Esayo's measurements. I brought over Jot's tifle and a caribou skin.

February 6-

Jot, Hal, Jerome, Oolie, Kakochea, Koolootina, and I were all out rabbit-hunting. Oolie and Koolootina got some, the latter one the former two. Esayo well provided left immediately after breakfast. Hal and I measured Kangah. Ordered Kangah to go walrus hunting. Gave Allen sick orders at the advice of the doctor, which he is to obey until further orders are given.

February 7-

By Hal's orders I had to stay indoors. Hal went over to the islands and brought two rabbits when he came back. Jerome went over to the island to look after things there. The boys went out hunting but they soon came back.

Shortly before noon Fitz came back. He reported that he was too weak and ill to proceed. He went to bed at once. After dinner Hal and I talked the matter over with Arklio, Nookapingwa, and Oobloya, the first two declaring that it was quite impracticable for them to go again, and Nookapingwa thought the same. I reluctantly gave my hope of sending them over again in a day or two, and gave them orders to get ready to go walrus hunting as soon as possible, which they said they would do.

February 8-

Allen went far down the coast. He is fast improving in health. Sammie and several of the others went out again but got nothing. I stocked up the pantry and the supply hoom again.

February 9-

Allen, Arklio, Oobloya, Kakochea, and Hal went out again. Arklio got two Green got up and took dinner with us. MacMillan, Etukashoo, Alnia, Ahningwa, and her child came in soon after dinner.

Respectfully submitted,

In charge of headquarters, pro tempore.

February 4 - I had a quite ill. I went to Sammie's, and Kookooch and after Allen's belonging's. Kookooch went over to the water post to pick out another gun. I took skin for my Kookooch and chance out to the island with the boys. Allen came in to stay.

February 5 - I went out to Sammie's Point to see how the boats were. Kookooch had no skin and Kookooch forgot to put grass in one of my kamiks, so before I could arrange to prevent my foot was frozen - not seriously. Hal is still in- disposed. He and I took Sammie's measurements. I brought over the 's' and a rabbit skin.

February 6 - Hal, Jerome, Ollie, Kookooch, Kookooch, and I were all out rabbit- hunting. Ollie and Kookooch got some, the latter one the former two. Kookooch provided left immediately after breakfast. Hal and I managed Kookooch. Ordered Kookooch to go with us hunting. Gave Allen stick orders at the advice of the doctor, which he is to obey until further orders are given.

February 7 - By Hal's orders I had to stay indoors. Hal went over to the island and brought two rabbits when he came back. Jerome went over to the island to look after things there. The boys went out hunting but they soon came back. Shortly before noon Tim came back. He reported that he was too weak and ill to proceed. He went to bed at once. After dinner Hal and I talked the matter over with Arklio, Kookooch, and Ollie, the first two declaring that it was quite impracticable for them to go again, and Kookooch thought the same. I reluctantly gave up hope of sending them over again in a day or two, and gave them orders to get ready to go with us hunting as soon as possible, which they said they would do.

February 8 - Allen went far down the coast. He is fast improving in health. Sammie and several of the others went out again but got nothing. Looked up the party and the supply room again.

February 9 - Allen, Arklio, Ollie, Kookooch, and Hal went out again. Arklio got to Green got up and took dinner with the children, Kookooch, Alma, Amiry, and her child came in soon after dinner. Respectfully submitted,

In charge of headquarters, pro tempore.

Headquarters Crocker Land Expedition,
Etah, North Greenland.

March 21st., 1915.

Mr. S. Elmer Noble
Etah, North Greenland.

Sir:

You are instructed to leave here tomorrow in full command of the main work of the Crocker Land Expedition of the season of 1915. This as planned by you is to be exploratory and scientific covering 1100 miles and consuming in time about 100 days.

Your main party will consist of Ne-ay-oo and Ne-took-ah-sh. Two supporting parties are at your disposal and will accompany you as long as they can be of assistance in expediting your plans. If no game is killed see that oil, biscuit, and pemmican are left at "Big Cache" and at head of Heitstedt Fiord for their return. Would advise that Ahlie and Moo-car-ping-wah go over glacier to head of Bay Fiord. Here you will instruct them to hunt musk-oxen, feed their dogs, obtain meat for return trip, and return to Etah direct.

At the "Big Cache" make an inventory of all equipment and supplies left by you and return it to me by De-blue-yah. Instruct him to transport all to Cape Robins with the exception of one tin of biscuit and one tin of milk.

During your stay at Lake Nezen you will prepare according to Dr. Tanquary's directions a few specimens of the salmon taken by your party. Accurate measurements, photographs, and notes on all will be valuable to him and will be of assistance in determining number and variety of species.

Examine carefully old Inuit igloos and tupic sites on shores of lake, measuring, photographing, and collecting whatever you may judge to be of interest to me ethnologically.

At Fort Conger, Headquarters of the Lady Franklin Bay Expedition of 1861-1863, you will find three small houses built by Admiral Peary in 1900. In one of these there is food and a note left by me in 1909.

Your enthusiasm and great interest in geology, botany, and ornithology is an assurance of the fact that work along these lines will be thoroughly done. My suggestions or instructions on my part are entirely unnecessary.

Upon your return south make every effort to cross Kennedy Channel before June 15th. At this time of year there should be plenty of seals upon the ice to provide food for your party and your thirty dogs. However within the next few weeks I will make every effort to establish a line of caches between Etah and a point 100 miles north. These will be six in number, marked by a flag, and at the following points: Cape Constitution, Cape Calhoun, Cape Russell, Cape Leiper, Cape Scott, and Cairn Point.

The thoroughness of your preparation, the excellence of your equipment, your year's experience in the field, the good health and rugged strength of yourself and party are all factors contributing toward a successful and most valuable trip.

Respectfully yours
